

audEERING is searching for participants in a study on speech interaction with an in-car board computer

In cooperation with a German car maker, audEERING is searching for people interested in actively contributing to the next generation of in-car speech interaction. The participants' voices will be recorded while they perform typical speech interactions with an in-car board computer. The recorded data will be used to train algorithms for machine learning.

Recordings will be made in a standing vehicle in Munich and will take approximately one hour per participant. The date for the recordings will probably be in the first half of February 2018. As a compensation, each participant will get a 35 Euro Amazon voucher.

Participants should be at least 18 years old and should be able to speak German at native level. No experience in interacting with car dialog systems is required. If you are interested, please contact Christoph Hausner: chausner@audeering.com
